Profile

Aspiring B.Tech  AI & Data Science student eager to apply academic knowledge in real-world IT projects. Passionate about learning and gaining hands-on experience in the IT industry through internship opportunities. Ready to work, contribute effectively, and grow by adapting to new challenges and technologies.

Skills

C++

Logic building for fitness tracking features.

Python

Voice assistant using NLP and speech recognition.

Data Analysis

Fitness data insights and user feedback.

Java

OOP-based modules for real-time health monitoring.

Artificial Intelligence

Smart interaction in AI-based projects.

Power BI

Ability to create an attractive dashboard.

Interests

Continuous Improvement — Focused on learning, self-development, and optimizing processes for better results., **Operation Excellence** — Interest in improving efficiency, productivity, and quality in systems and workflows., **Data Analytics** — Passionate about analyzing data to gain insights and support data-driven decision-making.

Education

B.Tech Artificial intelligence and data science

Events co-ordinator.

2023 – 2027

Coimbatore, India

Projects

Virtual Voice Assistance

Developed an AI-powered Virtual Voice Assistant using Python libraries, NLP, CNNs, and computer vision techniques to perform real-time voice commands, recognize user context, and assist with daily tasks. Integrated speech recognition, deep learning, and visual input processing to enhance user interaction and functionality.

2023 – 2024

Posture Analysis

2024 – 2025

Designed a real-time posture analysis system using PoseNet and YOLOv5 to detect and evaluate human body alignment. Implemented computer vision techniques to identify poor posture and provide corrective feedback, aiming to support fitness tracking and ergonomic improvement.

Leaf disease detection

2026 – Present

Developed a real-time leaf disease detection system using YOLOv11 for accurate object detection and classification. The model was trained on annotated leaf image datasets with preprocessing and data augmentation techniques to improve performance. The system provides reliable disease identification with bounding boxes and confidence scores, supporting practical applications in agriculture.

Professional Experience

Internship

07/2025 – 07/2025
Coimbatore

During my 15-day internship at Gateway Software Solutions as an AI and ML Intern, I contributed to the development of machine learning models and data-driven solutions.

□ I collaborated with the team to design and implement predictive models using Python and popular libraries such as NumPy, Pandas, and Scikit-learn. I gained hands-on experience in data preprocessing, model training, and performance evaluation, enhancing my skills in machine learning algorithms and understanding of real-world AI applications.

Certificates

- Spring boot
 - AWS Certifications [↗](#)
- Microsoft malware detection using machine learning [↗](#)
 - Problem Solving Through Programming in C
